

Cluster geometry vs. photon-scale resolvability ($J_{\pm} = -0.1J_{zz}$, $g_{\text{hex}} = 0.012J_{zz}$)

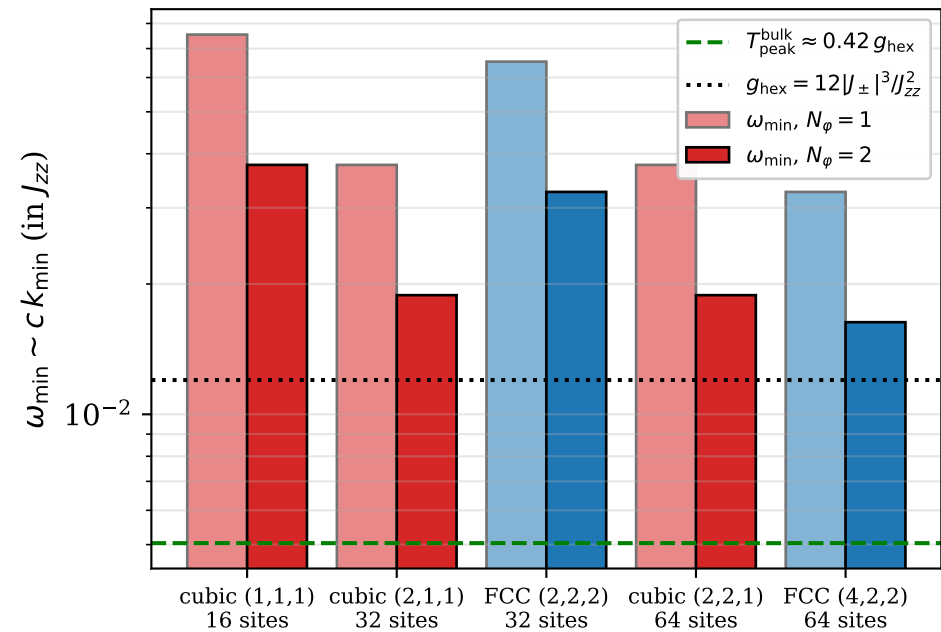

(a) Per-site contractible hexagons (bulk = 1)

(b) Brillouin-zone resolution

(c) Lowest sampled photon mode vs. bulk Schottky

■ cubic conventional cluster
 ■ FCC primitive cluster
 ○ ED feasible
 × Hilbert space too large
