

Six-site ice loops, unwrapped onto the $1 \times 1 \times 1$ pyrochlore PBC cell (green = start; dashed red = boundary-crossing bond)

Contractible $w = (0, 0, 0)$
lift closes inside one cell

● start

Wrapping $w = (0, -1, -1)$
lift ends in the neighbour cell (dotted box)

● start
✗ end = image of start
