

Projector kernel for two averaging schemes (slice $w_z = 0$)

(a) full 8-corner average $\frac{1}{8} \sum_{\varphi \in \{0, \pi\}^3} e^{i\mathbf{w} \cdot \varphi}$

(b) green/olive subset $\frac{1}{4} \sum_{|\varphi|_\pi \geq 2} e^{i\mathbf{w} \cdot \varphi}$
